Forecast for Sunday 27 Dec 2020

Weather: A bitterly cold day with bright intervals and snow showers, but mainly falling as sleet below 200m. Some showers could be heavy with hail and a low risk of thunder. Strong winds with occasional blizzard conditions on the high fell tops.

Chance of cloud free mountain/hill tops above 800m: 30%. Cloud bases highly variable but occasionally lowering to around 400m in showers. Best chance of clear tops over far eastern fells.

Visibility: Fast-changing as showers move through. Often down to a few hundred metres or less in low cloud and snow showers. Bursts of good visibility between showers.

Meteorologist's View

A return to full winter conditions on Sunday. Sudden gusts of 50mph in showers during the morning. Storm force winds on the tops overnight, easing by the morning.

Forecast for Monday 28 Dec 2020

Weather: Sleet or snow showers overnight and at first in the morning then becoming dry through the morning with bright spells. A few light snow showers in the afternoon, mainly across eastern fells.

Maximum wind: East or northeast 15-20mph. Severe wind chill.

Chance of cloud free mountain/hill tops above 800m: 30% early morning with extensive cloud above 600m. Becoming 80% through the morning with cloud lifting above summits. Patchy cloud on the tops in the afternoon.

Visibility: Very poor on high ground overnight and early morning. Becoming very good with just temporary reductions in snow showers.

Temperature: **Valleys:** Plus 1C rising to 3 or 4C, falling to Minus 1C in evening.
At 800m: Minus 2 or 3C.
Freezing level: 300m.

Mountain Weather Forecast

Ground Conditions Supplement

Date: Saturday 26 December Location: Helvellyn summit at 13:30 Temperature: plus 0.2degC Maximum wind speed 59.9mph Wind chill: minus 10.0degC Average wind speed: 40.8mph Full report: The great snow conditions from the last couple of days are rapidly thawing as the freezing level rose above the summits and a strong SW wind brought rain at all levels. The remaining snow can generally be found above 650m on S through W facing slopes. However where it has been compressed beneath walkers feet icy patches can be found on paths down to 500m. Above 950m there was still some rime ice holding on but generally everything was soft, slushy and thawing fast. The walking routes from Thirlmere can generally be climbed without setting on foot on snow with some careful route choice. Microspikes were the best option today giving good traction on Striding & Swirral Edges which were a combination of slush & wet rock. However if the freezing level does drop then all these saturated snow patches will quickly refreeze forming neve on which crampons & an ice axe will be essential for safety on these and other exposed routes. There were a number of groups heading up the mountain late in the day with minimal kit and unsuitable clothing & footwear. Sunset is currently around 3.50pm so starting early and carrying a head torch along with plenty of warm and waterproof clothing and a map & compass is to be recommended. Googles were also a very useful addition today to help deal with the 60mph winds and driving rain.
